

PS367: Psychology Across Cultures

In a fast changing world, "Psychology Across Cultures" explores how and why people's basic psychological processes, values and behaviour differ across cultures and what this implies for psychological theory and application. The module highlights the importance of a cross-cultural perspective for understanding and explaining different contemporary issues such as migration, ethnic conflicts, globalisation and cultural change. In academic terms, the module aims to develop the students' understanding of the fundamental concepts and theoretical perspectives pertinent to the study of culture and human behaviour.
